

Develop a responsive Student Admission Form with CSS Grid layout that works seamlessly across desktop, tablet, and mobile devices.

Step 1 — Create two files

Create:

student-form

|

└─ index.html

└─ style.css

Step 2 — HTML

index.html

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Student Admission Form</title>

  <link rel="stylesheet" href="style.css">
</head>

<body>

  <div class="container">

    <h1>Student Admission Form</h1>

    <form>

      <div class="form-group">
        <label>Student Name</label>
        <input type="text" required>
      </div>

      <div class="form-group">
        <label>Email</label>
        <input type="email" required>
      </div>

      <div class="form-group">
```

```
<label>Mobile</label>
<input type="tel" required>
</div>

<div class="form-group">
  <label>Date of Birth</label>
  <input type="date">
</div>

<div class="form-group">
  <label>Course</label>

  <select>
    <option>Select Course</option>
    <option>CSE</option>
    <option>CSIT</option>
    <option>ECE</option>
    <option>EEE</option>
  </select>
</div>

<div class="form-group">
  <label>Gender</label>

  <select>
    <option>Select Gender</option>
    <option>Male</option>
    <option>Female</option>
  </select>
</div>

<div class="form-group full">
  <label>Address</label>
  <textarea rows="4"></textarea>
</div>

<div class="buttons full">
  <button type="submit">Submit</button>
  <button type="reset">Reset</button>
</div>

</form>

</div>

</body>
</html>
```

HTML concepts

- `<form>` → creates the form
- `<label>` → identifies the field
- `<input>` → accepts data
- `<select>` → dropdown
- `<textarea>` → multiple-line input
- `<button>` → action

Step 3 — Basic CSS

Now open style.css.

```
*{
  box-sizing: border-box;
}

body{
  font-family: Arial;
  background: #f2f2f2;
  margin: 0;
  padding: 20px;
}

.container{
  max-width: 900px;
  margin: auto;
  background: white;
  padding: 25px;
}

h1{
  text-align: center;
}
```

"Our next job is to arrange these fields into two columns."

Step 4 — The Main Concept: CSS Grid

Add:

```
form{
  display: grid;
  grid-template-columns: 1fr 1fr;
  gap: 20px;
```

```
}
```

Description:

```
1fr    1fr
↓      ↓
```

```
50%    50%
```

So the form becomes:

```
Student Name    Email
[_____]         [_____]

```

```
Mobile          Date of Birth
[_____]         [_____]

```

```
Course          Gender
[_____]         [_____]

```

gap

gap: 20px;

means:

Keep 20px space between rows and columns.

Step 5 — Style the fields

Add:

```
.form-group {
  display: flex;
  flex-direction: column;
  gap: 5px;
}

input,
select,
textarea {
  width: 100%;
  padding: 10px;
  border: 1px solid #ccc;
  border-radius: 5px;
}

label {
  font-weight: bold;
}
```

Step 6 — Make Address Full Width

"Address needs more space. How can we make it occupy both columns?"

```
.full {  
  grid-column: 1 / -1;  
}
```

Description:

Column 1 Column 2

\ /
\ /

FULL WIDTH

So:

Student Name Email
[] []

Mobile DOB
[] []

Course Gender
[] []

Address
[]
[]

Step 7 — Style buttons

Add:

```
.buttons {  
  text-align: center;  
}  
  
button {  
  padding: 10px 25px;  
  margin: 5px;  
  border: none;  
  border-radius: 5px;  
  cursor: pointer;  
}
```

Step 8 — Responsive Design

"What happens when we open this on a mobile phone?"

The two-column layout will be too narrow.

media query.

Add:

```
@media (max-width: 600px) {  
  
  form {  
    grid-template-columns: 1fr;  
  }  
  
  .full {  
    grid-column: auto;  
  }  
  
}
```

Description:

Desktop
↓
2 columns

Mobile
↓
1 column

Desktop

Name	Email
Mobile	DOB
Course	Gender
Address	

Mobile

Name

Email

Mobile

DOB

Course

Gender

Address

Final CSS

```
* {  
  box-sizing: border-box;  
}
```

```
}

body{
  font-family: Arial;
  background: #f2f2f2;
  margin: 0;
  padding: 20px;
}

.container{
  max-width: 900px;
  margin: auto;
  background: white;
  padding: 25px;
}

h1{
  text-align: center;
}

form{
  display: grid;
  grid-template-columns: 1fr 1fr;
  gap: 20px;
}

.form-group{
  display: flex;
  flex-direction: column;
  gap: 5px;
}

label{
  font-weight: bold;
}

input,
select,
textarea{
  width: 100%;
  padding: 10px;
  border: 1px solid #ccc;
  border-radius: 5px;
}

.full{
  grid-column: 1 / -1;
}
```

```
.buttons {
  text-align: center;
}

button {
  padding: 10px 25px;
  margin: 5px;
  border: none;
  border-radius: 5px;
  cursor: pointer;
}

@media (max-width: 600px) {

  form {
    grid-template-columns: 1fr;
  }

  .full {
    grid-column: auto;
  }

}
```
